Arcángel Cuántico

FICCIÓN SIN LÍMITES WIKI

Veréis en su perfil se dice que el arcángel cuántico es capaz de dañar el Time Vortex, lo que lo hace **1-C Alto (11-D).** Vereis, hay un problema con eso.

Sí, el verso tiene 11-Dimensiones.

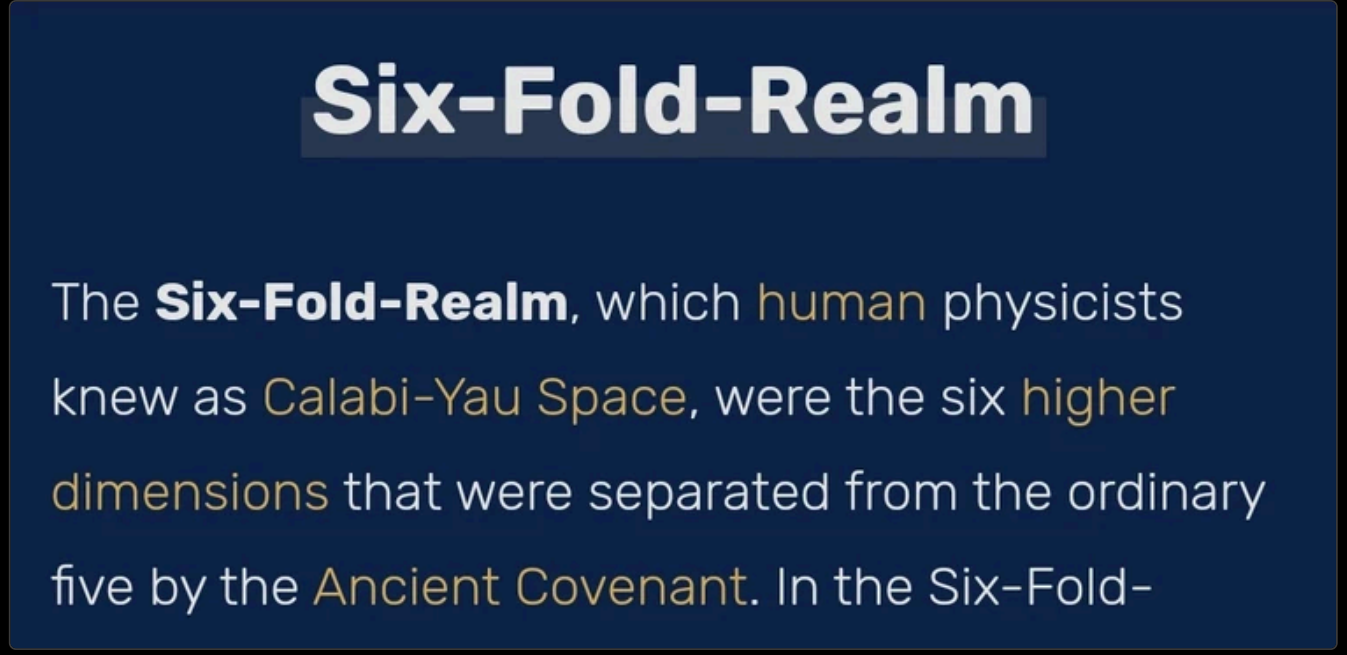
When the universe was created, dimensions started to solidify out of the primal chaos [...] And in the aftermath of Event Zero, eleven dimensions did fight for existence. Five were triumphant - together they did become the three dimensions of space, and the two dimensions of time through which we travel. But the remaining six dimensions did still exist: although beaten, although denied their dominance, they curled and curdled amongst themselves to become a six-fold universe, separate yet conjoined.

Ya que el verso se compone de las 5 dimensiones principales del espacio y el tiempo, y las otras 6 se conformaron como un solo plano de existencia llamado ***El Espacio Calabi-Yau*** o como los llaman los Señores del Tiempo ***El Reino Sextuple***



Six-Fold-Realm
The Six-Fold-Realm, which human physicists knew as Calabi-Yau Space, were the six higher dimensions that were separated from the ordinary five by the Ancient Covenant. In the Six-Fold-

Porque digo esto si estoy mostrando pruebas de que solamente existen 11 dimensiones?

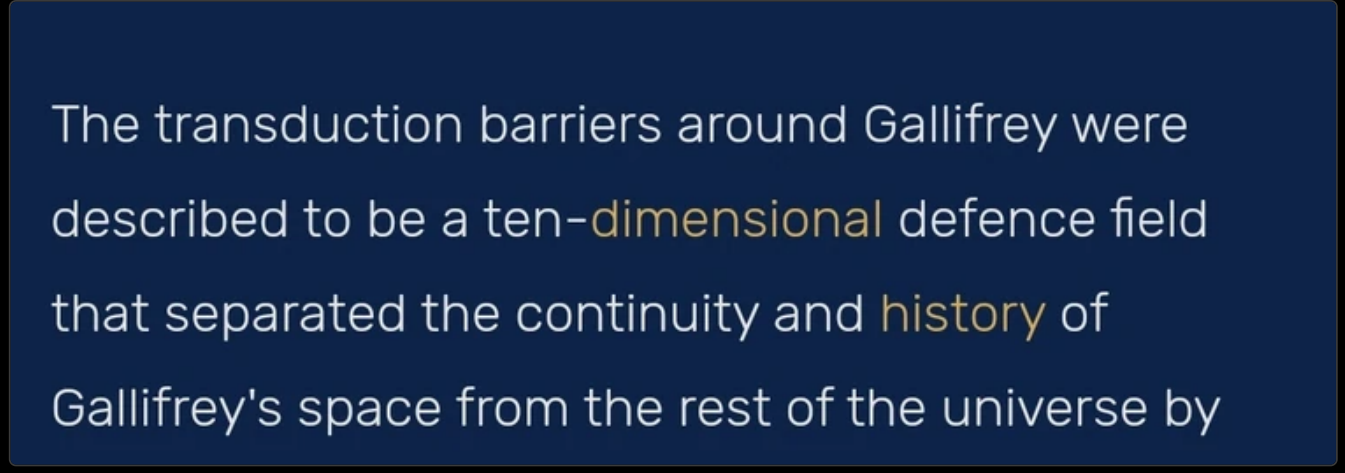
Veréis, El Doctor lo explica un poco para que lo entendamos, en la novela Autumn Most, el doctor explica como hay seres que son capaces de interactuar con **planos y dimensiones** superiores, hablando explícitamente de un ser que es capaz de interactuar con dichos **planos.**

> ***“*** *The Doctor shook his head. ‘Let me put it this way. Imagine Earth is a tower block. Each parallel world is a different floor. But each floor has eleven apartments, which correspond to the various dimensions or planes within that level. So, our perceptions keep us confined to apartments 1A to 1D, but the Sidhe have access to 1A through to 1K.’ ‘And would those parallel worlds have eleven dimensions, too?’*
> *‘If they’re in a universe where the same physical laws apply, then yes, and they’d have their own parallel Sidhe as well.’*
> *„~ Doctor Who - Autumn Mist, pg. 124*

Entonces bien, la pregunta es, porque digo que el reino Sextuple son planos cuando claramente se muestran como dimensiones superiores?

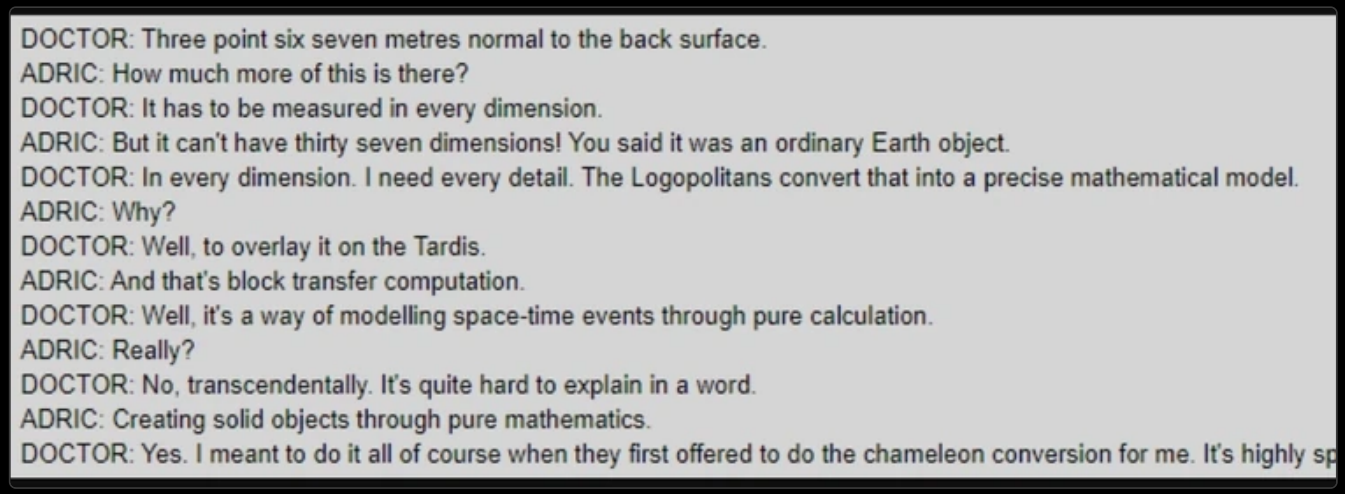
Pues por las contradicciones lógicas que conlleva pensar que el universo solo tiene 11 dimensiones.

- Para empezar, Gallifrey tiene, siendo **un planeta que existe en la tercera dimensión, una barrera de 10-Dimensiones**



The transduction barriers around Gallifrey were described to be a ten-dimensional defence field that separated the continuity and history of Gallifrey's space from the rest of the universe by

- **Objetos de 37 dimensiones**



DOCTOR: Three point six seven metres normal to the back surface.
ADRIC: How much more of this is there?
DOCTOR: It has to be measured in every dimension.
ADRIC: But it can't have thirty seven dimensions! You said it was an ordinary Earth object.
DOCTOR: In every dimension. I need every detail. The Logopolitans convert that into a precise mathematical model.
ADRIC: Why?
DOCTOR: Well, to overlay it on the Tardis.
ADRIC: And that's block transfer computation.
DOCTOR: Well, it's a way of modelling space-time events through pure calculation.
ADRIC: Really?
DOCTOR: No, transcendentally. It's quite hard to explain in a word.
ADRIC: Creating solid objects through pure mathematics.
DOCTOR: Yes. I meant to do it all of course when they first offered to do the chameleon conversion for me. It's highly sp

- **LA TARDIS MANIPULANDO 35-DIMENSIONES CASUALMENTE**

The police-box form of the TARDIS quavered and was suddenly sucked into its own centre point. From around its diminishing outer edges burst a torrent of dimensions, grey and gold, surging and churning across the void. Shapes and angles, ideas and nightmares, yesterday and tomorrow, hurled and colliding together until they formed Now.

Time and Space and thirty-five other dimensions were turned inside out.

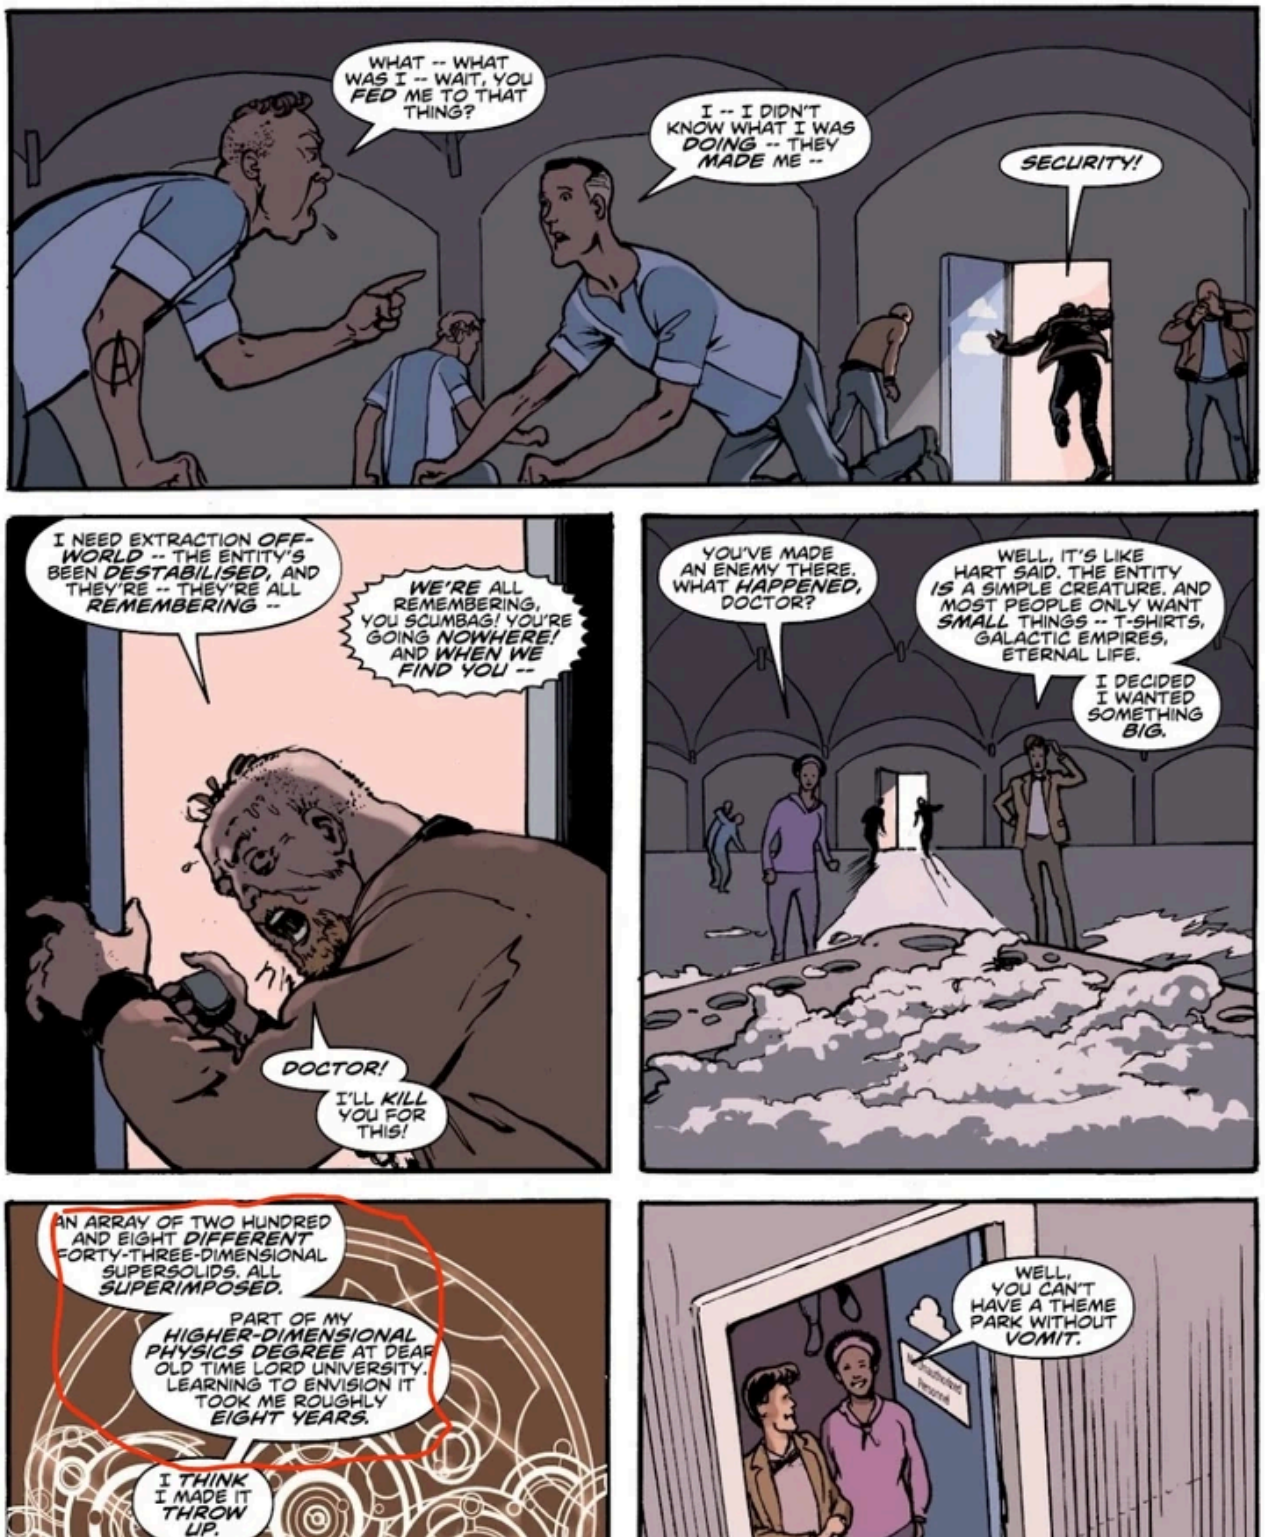
The Doctor's companions lay face down on the tower as the tumult raged above them. The Doctor lay flat on his back, eyes glazing at his front-seat view of the incalculable and impossible. His teeth rattled in his head.

- Túneles cuánticos de 13 dimensiones

‘But … the Wraiths were trapped there for all time … for every time.’ Ace felt fear balling up deep inside her. ‘You can’t have set them free.’

‘No, indeed, I cannot. Were I to widen the 13 dimensional tunnel that bridges the Quantum Anvil’s realm and our physical universe, the Astingir, the Shadow Proclamation, all the civilised races of the galaxy would rain down hell upon us to shatter that link. But this way …’ Halogi-Kari smiled. ‘Just as a fly can buzz around a room for hours before chancing on the window ajar that leads to freedom, so it is with these poor damaged creatures. Slowly, one by one, a number of Wraiths have found the way through. Do you wish to see? I think that you do.’

- EL DOCTOR PUDIENDO PENSAR CON SÓLIDOS DE 43 DIMENSIONES



WHAT -- WHAT WAS I -- WAIT, YOU FED ME TO THAT THING?
I -- I DIDN'T KNOW WHAT I WAS DOING -- THEY MADE ME --
SECURITY!
I NEED EXTRACTION OFF-WORLD -- THE ENTITY'S BEEN DESTABILISED, AND THEY'RE -- THEY'RE ALL REMEMBERING --
WE'RE ALL REMEMBERING, YOU SCUMBAG! YOU'RE GOING NOWHERE! AND WHEN WE FIND YOU --
DOCTOR!
I'LL KILL YOU FOR THIS!
YOU'VE MADE AN ENEMY THERE. WHAT HAPPENED, DOCTOR?
WELL, IT'S LIKE HART SAID. THE ENTITY IS A SIMPLE CREATURE. AND MOST PEOPLE ONLY WANT SMALL THINGS -- T-SHIRTS, GALACTIC EMPIRES, ETERNAL LIFE.
I DECIDED I WANTED SOMETHING BIG.
AN ARRAY OF TWO HUNDRED AND EIGHT DIFFERENT FORTY-THREE-DIMENSIONAL SUPERSOLIDS. ALL SUPERIMPOSED.
PART OF MY HIGHER-DIMENSIONAL PHYSICS DEGREE AT DEAR OLD TIME LORD UNIVERSITY. LEARNING TO ENVISION IT TOOK ME ROUGHLY EIGHT YEARS.
I THINK I MADE IT THROW UP.
WELL, YOU CAN'T HAVE A THEME PARK WITHOUT VOMIT.

- DIAGRAMAS DE DYNKIN DE 249 DIMENSIONES

> Time sped up. I saw through artificial hyper-accelerated light streams the work being undertaken on the billions of cubic kilometres of the star-web. I saw it woven by three vast ships, each a light year in length, deft and precise as needles. I saw a shape that trembled on the verge of comprehension only to pull away. Through its ghostly linkages to my brain, my timeship saw with me, but its chatter of Dynkin diagrams and 249-dimensional representations, told me nothing beyond the fact that I was seeing a structure perhaps sixty times as dense with information as a complex genome. Worlds *as* biodata.

Y podría seguir mandando scans de dimensiones superiores o iguales a las 11 que ya existen en las 5 primeras.

Entonces, la idea principal sería decir que el reino Sextuple y las dimensiones superiores las cual habla son **planos y no dimensiones, por puras contradicciones.**

Entonces, a cuanto escala la cosmología?

La parte del universo lo haremos rápido. (si, para sorpresa de nadie es infinito):

> *“I shall be loose in a wild, unforgiving universe, a cosmos with no walls. I can hardly conceive of such infinite horror.”* - Relative Dimensions
> *“Beyond that could be seen eternity, endless space and an infinity of colours. Colours wild and impossible: colours out of space.”* - The Taking of Planet 5
> *“Assuming that the Doctor never found what had happened to her – which, considering the infinite possibilities in an infinite universe, was highly likely – and she was left stranded on Earth, she would have to get away from Antarctica as soon as possible.”* - The Taking of Planet 5
> *“Isolation prison terms for the infinite duration of the universe.”* - Once, upon time

El multiverso es infinito y se expande constantemente

There are also sources like Spiral Scratch and Auld Morality (see Marc Platt's Cosmology & The Music of the Spheres) that claim the multiverse is not only infinite, but expands exponentially.

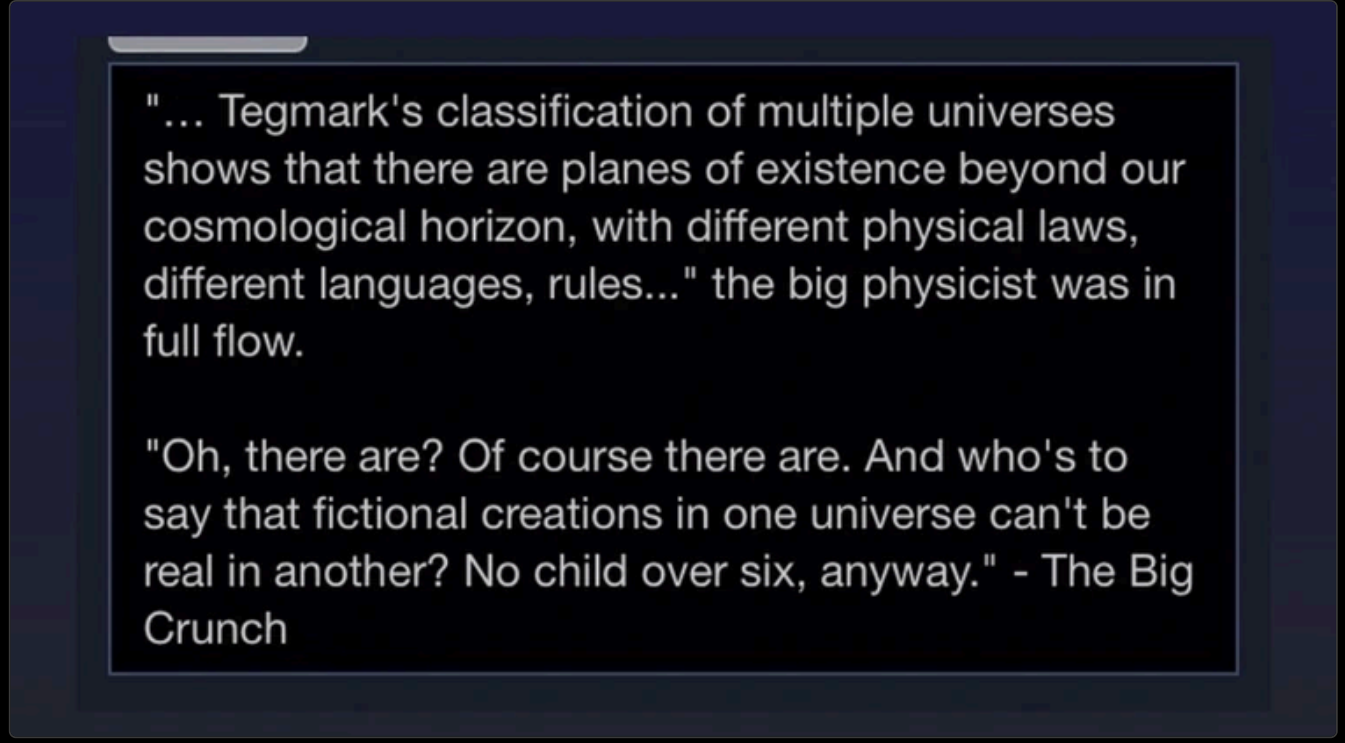
- *Of course, in a multiverse that expands exponentially and is unfixed and infinite in nature, a 'centre' is a theoretical and practical impossibility.*
- *I discovered Rummas was trying to stop me, all the Lampreys throughout the multiverse, and so I opted to stop him.' An infinite number of Rummases in an infinite number of universes,' the Doctor said (not that Sir Bertrand understood a word, and yet there was something...). 'You do realise that's an impossible mission, don't you?'*

Y ahora hemos llegado a lo importante, el multiverso.

- Para empezar, el multiverso es considerado un Multiverso de Tegmark tipo IV

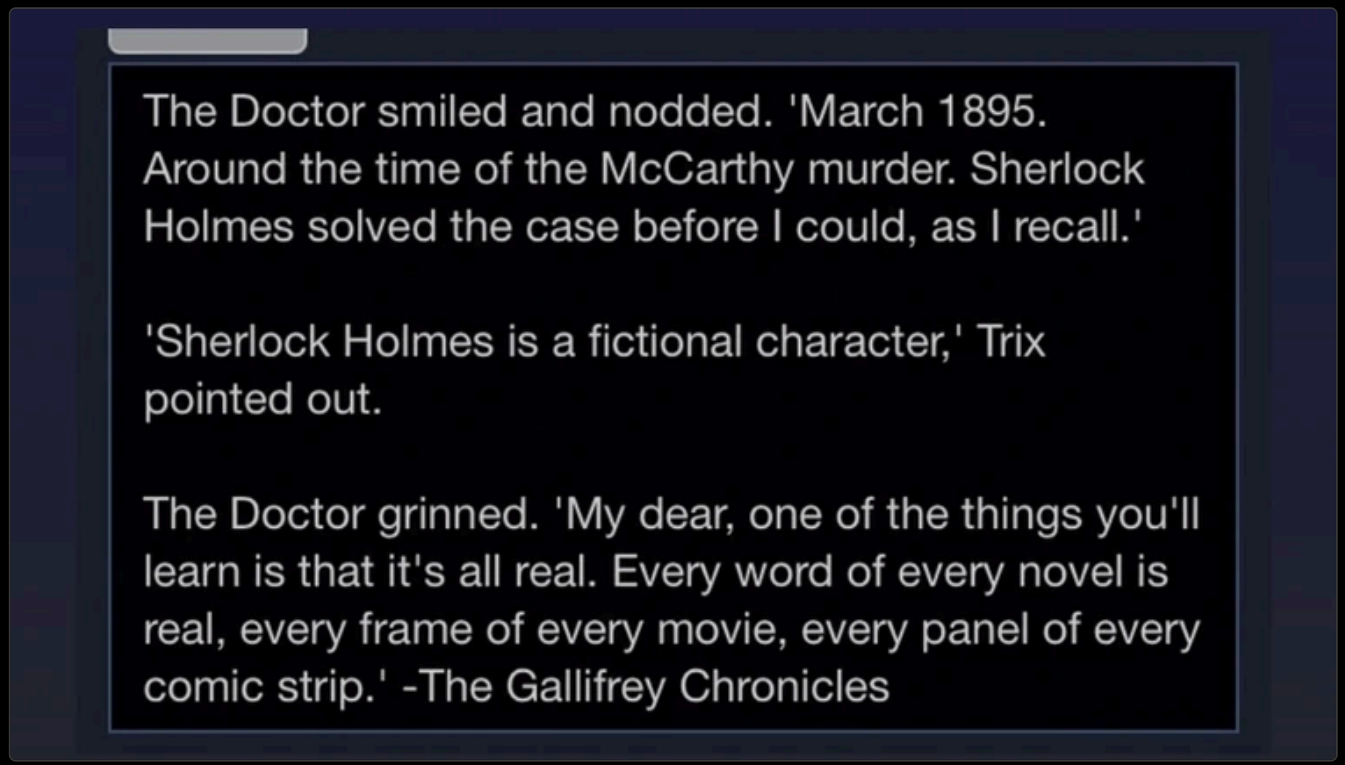
In 2003, physicist Max Tegmark suggested that there might be four different types of multiverse.

Lastly, in Level IV universes, even the laws of physics can be different and anything might happen. In Battlefield (1989), the Doctor says the Arthurian knights come from another dimension and sideways in time from another universe, one where magic seems to be real. That suggests the other Earth where King Arthur is real has its own laws of physics, different to our own. If all possibilities are played out somewhere, then there's a universe where Doctor Who is real - all of it, even the bits that are contradictory or silly, and another universe where you are the Doctor, and another where you're a Dalek. -Scientific Secrets of Doctor Who



"... Tegmark's classification of multiple universes shows that there are planes of existence beyond our cosmological horizon, with different physical laws, different languages, rules..." the big physicist was in full flow.
"Oh, there are? Of course there are. And who's to say that fictional creations in one universe can't be real in another? No child over six, anyway." - The Big Crunch

Incluyendo dentro de estos, otras obras de ficción.



The Doctor smiled and nodded. 'March 1895. Around the time of the McCarthy murder. Sherlock Holmes solved the case before I could, as I recall.'
'Sherlock Holmes is a fictional character,' Trix pointed out.
The Doctor grinned. 'My dear, one of the things you'll learn is that it's all real. Every word of every novel is real, every frame of every movie, every panel of every comic strip.' -The Gallifrey Chronicles

Sumándole a esto que en el "Professor Bernice Summerfield and the Infernal Nexus (novel)", una novela del universo expandido del Whoniverso, el multiverso se puede ver de la siguiente manera.

> She would never have a clear memory of the feelings that followed – feelings that the human body was never meant to experience and with which the human mind was ever meant to cope. Intellectually, she knew that she was merely rotating through the extradimensional axis that three-dimensional beings do all the time – the three dimensions plus Time that we know being only three-plus-Time of an infinite dimensional set – without even knowing it.

Existiendo un set de infinitas dimensiones.

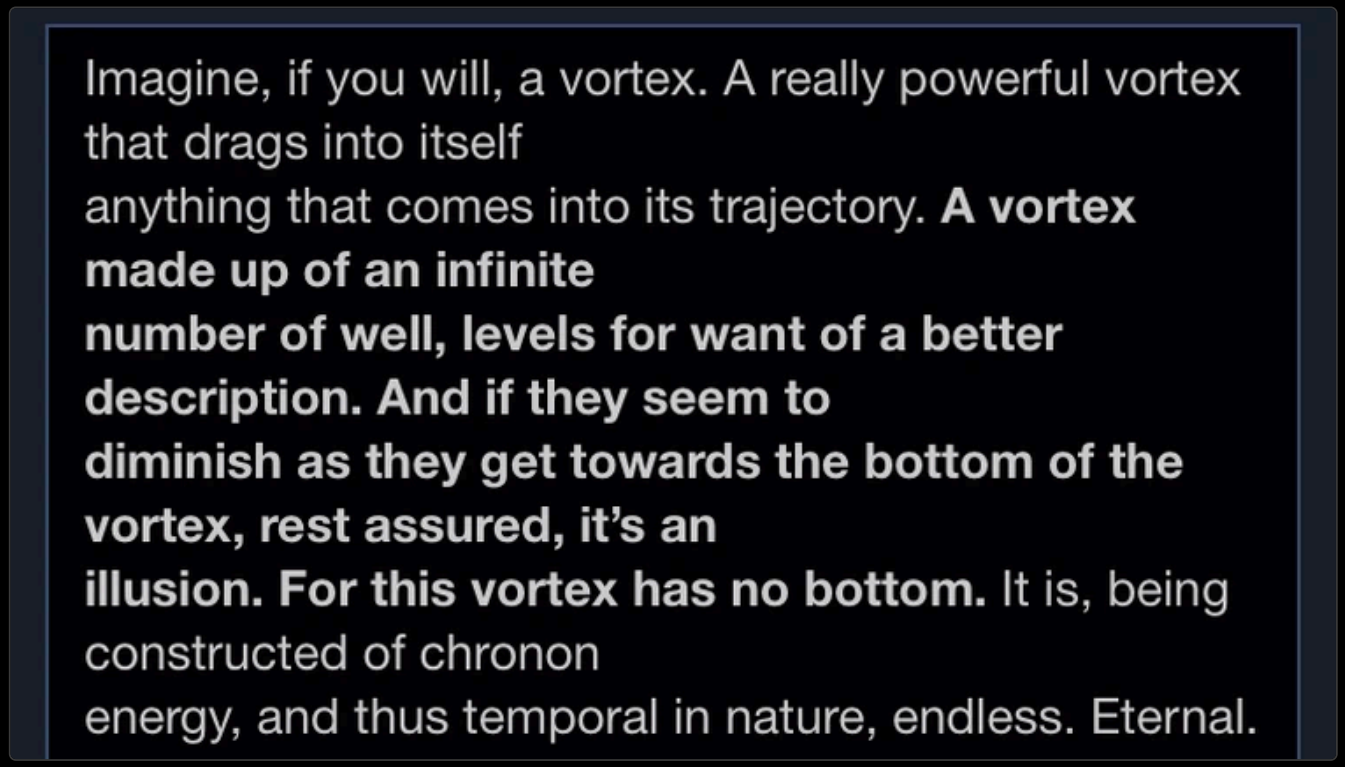
Dicho esto, creo que podemos decir que el multiverso es **1-B Alto.**

Y ahora el Time Vortex:

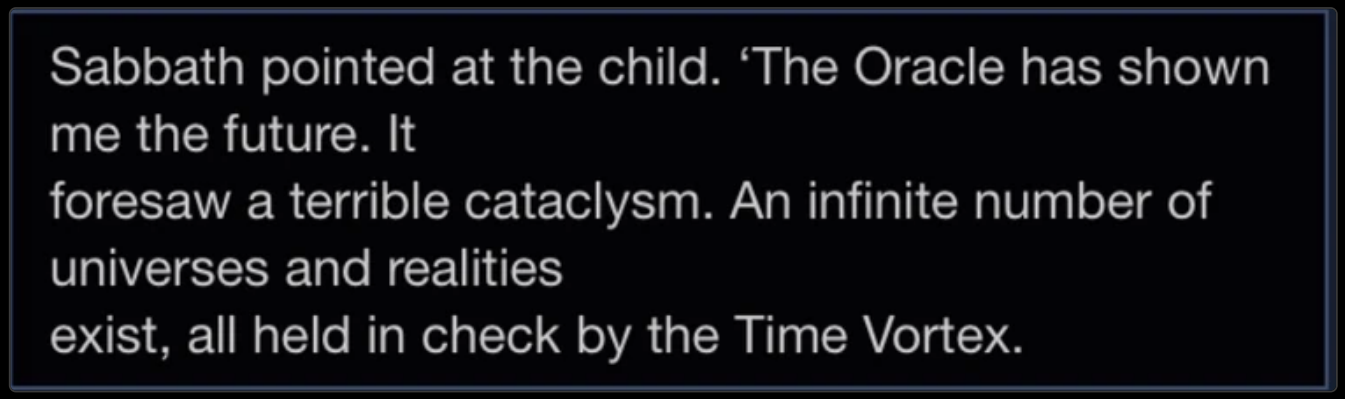
El time vortex existe en la 5ta dimensión.

> Time". (PROSE: *Who is Dr Who?*) It existed within the 5th-dimension. (COMIC: *Vortex Butterflies*) It existed outside of time and the universe itself, (PROSE: *The Dark Path*) meaning time and the Vortex that being in the Vortex constituted being

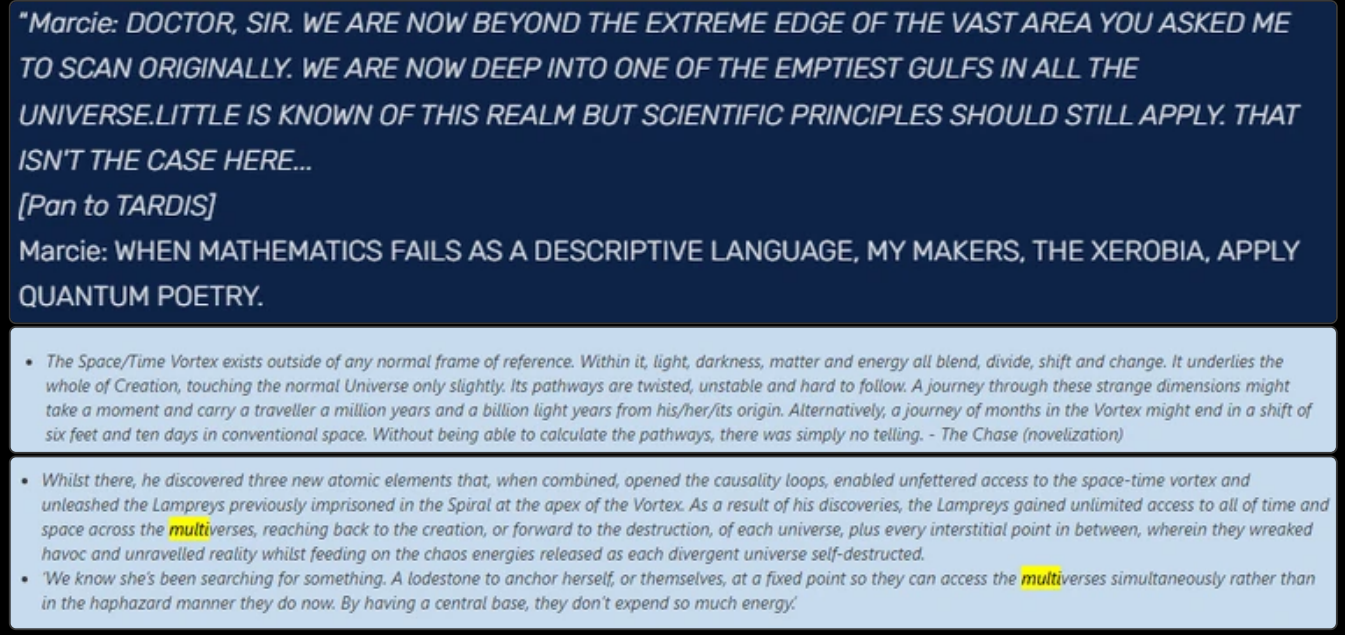
Y el Time Vortex contiene todo el multiverso y es lo que lo mantiene, existe mas alla de la creación, apenas rozandola, pero el time vortex no solamente tiene un multiverso, contiene muchos más. También se dice que una vez entrado ahí, las leyes físicas y las propias matemáticas dejan de funcionar , siendo este que si dejase de existir el multiverso simplemente dejaria de existir. Para terminar aclarar que el Time Vortex contiene una cantidad infinita de niveles de realidad, existiendo en estos los multiversos, y que cuando mas abajo vayas, más parecera una ilusión (trascendencia entre capas)



Imagine, if you will, a vortex. A really powerful vortex that drags into itself
anything that comes into its trajectory. **A vortex made up of an infinite number of well, levels for want of a better description. And if they seem to diminish as they get towards the bottom of the vortex, rest assured, it's an illusion. For this vortex has no bottom.** It is, being constructed of chronon
energy, and thus temporal in nature, endless. Eternal.



Sabbath pointed at the child. 'The Oracle has shown me the future. It
foresaw a terrible cataclysm. An infinite number of universes and realities
exist, all held in check by the Time Vortex.



"Marcie: DOCTOR, SIR. WE ARE NOW BEYOND THE EXTREME EDGE OF THE VAST AREA YOU ASKED ME TO SCAN ORIGINALLY. WE ARE NOW DEEP INTO ONE OF THE EMPTIEST GULFS IN ALL THE UNIVERSE.LITTLE IS KNOWN OF THIS REALM BUT SCIENTIFIC PRINCIPLES SHOULD STILL APPLY. THAT ISN'T THE CASE HERE...
[Pan to TARDIS]
Marcie: WHEN MATHEMATICS FAILS AS A DESCRIPTIVE LANGUAGE, MY MAKERS, THE XEROBIA, APPLY QUANTUM POETRY.
• The Space/Time Vortex exists outside of any normal frame of reference. Within it, light, darkness, matter and energy all blend, divide, shift and change. It underlies the whole of Creation, touching the normal Universe only slightly. Its pathways are twisted, unstable and hard to follow. A journey through these strange dimensions might take a moment and carry a traveller a million years and a billion light years from his/her/its origin. Alternatively, a journey of months in the Vortex might end in a shift of six feet and ten days in conventional space. Without being able to calculate the pathways, there was simply no telling. - The Chase (novelization)
• Whilst there, he discovered three new atomic elements that, when combined, opened the causality loops, enabled unfettered access to the space-time vortex and unleashed the Lampreys previously imprisoned in the Spiral at the apex of the Vortex. As a result of his discoveries, the Lampreys gained unlimited access to all of time and space across the multiverses, reaching back to the creation, or forward to the destruction, of each universe, plus every interstitial point in between, wherein they wreaked havoc and unravelled reality whilst feeding on the chaos energies released as each divergent universe self-destructed.
• 'We know she's been searching for something. A lodestone to anchor herself, or themselves, at a fixed point so they can access the multiverses simultaneously rather than in the haphazard manner they do now. By having a central base, they don't expend so much energy.'

Haciendo que el time vortex sea **1-A**

Y el reino Sextuple existiria por encima del time vortex. Pero eso hablaremos en otro momento.

Por el momento, teniendo en cuenta que arcangel pudo dañar la estructura del time vortex, se le podría dar tier 1-A.

(Xd lo estoy escribiendo en teléfono, si hay problemas decid y lo hablamos)

Honestamente el argumento de dimensiones superiores dentro de espacios 3D no me convence. Es correcto que pueden existir dimensiones superiores en mundos tridimensionales, sí, pero eso no significa que vayan a poseer una estructura transfinita al espacio-tiempo de la realidad, aún y si ya

existen dimensiones superiores al espacio-tiempo. Lo mostrado sería Manipulación y Existencia de Dimensiones Superiores, pero por sí solo no escalaría a un nivel específico, sino haxs.

Fuera de eso sí estoy de acuerdo con el nivel 1B Alto, considerando la existencia del conjunto infinito de dimensiones superiores. Aunque con el 1A me mantengo neutral, ya que no vi una prueba de que el Time Vortex transcienda estas dimensiones superiores, a excepción de que sea infinitamente más grande, lo cual solo lo haría 1B Alto pero más alto que el baseline.

- *'The Time Vortex is virtually indestructible; it is the fundamental reality which supports all of creation. In many respects, the physical universe is nothing but a shadow of the Vortex. But the link is two-way: do something unimaginably nasty in the real world, and it might just affect the Vortex.' Roz frowned. 'But what could be so unimaginably nasty?' The Doctor's voice was sepulchral as he replied. 'A Jonbar Hinge: an event which shatters the Web of Time, rewriting history on a major scale.' This did not bode well. 'Such as?' 'Such as the destruction of Earth.' She shook her head. 'But Earth's still there. We saw it.' And the obvious defence. 'It's still there in the thirtieth century!' 'The Vortex isn't answerable to the laws of cause and effect, Roz. The destruction could happen tomorrow, or it could happen in thousands of years. But history has been or will be altered. Earth was or will be destroyed. Excuse the ambiguous tenses – this is a very ambiguous concept.'*

Se considera el multiverso del doctor como una mera sombra de la enormidad del time vortex.

A lo que me quería referir era a que la cosmo no capea en 11-D, nada más.

En VSBW el Time Vortex sería mas que 1-B Alto, como 1-A Bajo o 1-A no c.
Pero acá es diferente. En FSL un ser Outerversal es aquel ser que no le importa los conceptos del espacio y el tiempo, existe como algo independiente y fuera de ellos. Esto refiere a que existe mas allá de toda comprensión dimensional, ya sea cero, una, dos, tres, infinitas o más dimensiones espaciales.

El Time Vortex parece ser algo que es mucho mas grande que el Multiverso 1-B Alto si, eso te lo compro. Pero, eso no es suficiente para calificar como 1-A aquí. Un ser Hyperversal Alto no podrá acceder a un reino Outerversal, no importa la cantidad de dimensiones espaciales que haya de por medio. Incluso si le metemos Aleph_Omega y todo lo que quieras, acá no es así.

Me parece que un 1-B Alto al Angel estaría perfecto.

Pues entonces que se quede en 1-B Alto de momento si en verdad hay problemas con el 1-A, creo que haré un superhilo explicando detalladamente la cosmo hasta donde la controlo, y si no janemba me ayuda
